PROFESSIONAL PROFILE

Front-end engineer focused on scalable React and Next.js systems, build performance, and developer-tooling standards (TypeScript, ESLint, Webpack). Designs and modernises production platforms, raises Core Web Vitals, and builds reusable component systems. Partners with backend, product, SEO, and content teams, and uses Lighthouse, real-user monitoring, and product analytics to drive decisions. Also builds RESTful APIs with Node.js, Express, and MongoDB (Mongoose), and applies AI-assisted development to ship faster without dropping review standards. Delivery experience across the UAE, China, and the UK.

EXPERIENCE

Front-End Developer Oct 2025 – Present

Gi Properties · Dubai, UAE · Full-time

Led the design and phased rollout of a legacy EJS to Next.js + TypeScript migration (SSR/SSG), improving Core Web Vitals (LCP/INP) by 40% and establishing a maintainable architecture for a live Dubai real-estate platform.

Designed a reusable component architecture and design-system conventions used across listing, community, and marketing surfaces, accelerating feature delivery and UI consistency.

Rebuilt the front-end build pipeline with structured package management and Webpack bundling; reduced asset size, shortened feedback loops, and added environment-specific production and staging optimizations.

Established TypeScript strict mode, ESLint rules, and code-review practices to raise code quality and reduce regressions.

Shipped an internal CMS dashboard so SEO and content teams could manage dynamic assets independently, cutting engineering toil and improving time-to-publish.

Integrated JSON API contracts with the backend, Service Worker caching, semantic HTML, and structured data. Instrumented GA4, Google Tag Manager, Lighthouse, and RUM, and translated product requirements into performance targets and component-level checks.

Front-End Developer May 2025 – Sep 2025

DiDi Global · Beijing, China · Full-time

Built responsive Next.js + TypeScript interfaces for a global mobility product, aligning UI behaviour with evolving multi-market requirements.

Integrated React Intl and i18next for 13 countries, reducing locale-related deployment errors and enabling safer multi-region rollouts.

Led a Tailwind CSS v4 compatibility pass across components and layouts, and configured Google Tag Manager triggers and tags to improve analytics coverage.

Web Developer Sep 2024 – Feb 2025

OVZA LTD · United Kingdom · Contract (remote)

Built accessible, cross-browser, mobile-responsive front ends with HTML5, CSS3, and JavaScript; integrated third-party JSON APIs; and applied technical SEO markup and asset optimization.

Reduced production error rates by about 30% over six months through Git-based code reviews, systematic debugging, and structured testing of UI components.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, JSON, Dart

UI systems: React, Next.js (SSR/SSG), Angular, Redux / Redux Toolkit, Zustand, Tailwind CSS, Sass, Radix UI, Chakra UI, Framer Motion

Backend: Node.js, Express.js, MongoDB, Mongoose, RESTful API design (routes, JSON, HTTP methods and status codes), npm

Tooling & DX: Webpack, npm, ESLint, TypeScript strict mode, Git / GitHub, Service Workers, Cypress, Agile delivery

Performance: Core Web Vitals, Lighthouse, RUM, caching, Google Analytics (GA4), Google Tag Manager

Practices: Design systems, platform modernization, technical SEO, API integration, component testing, AI-assisted development

EDUCATION

Front-End and Cross-Platform Mobile Development Apr 2024 – Oct 2024
ITI — Information Technology Institute, Egypt

Bachelor's Degree in Business Sep 2018 – May 2022
Ain Shams University, Cairo, Egypt

CERTIFICATIONS

Programming with JavaScript — Meta 2024
Increase SEO Traffic — Coursera 2024
Database Fundamentals — MaharaTech 2024
The Complete Node.js Course — MaharaTech 2026

LANGUAGES

Arabic — Native. English — Professional working proficiency (written and spoken).

ADDITIONAL INFORMATION

International delivery across the UAE, China, and the UK; comfortable across time zones with product, backend, and content teams.

Egyptian national, based in New Cairo. Open to hybrid and on-site work in Cairo. Notice period as per current employment contract.
